

Northern Rebellion Candle - Fragrance Testing Kit

This guide will help you test your layered fragrance concept with beeswax. Follow the instructions below and use the scorecard on the next page to track each test.

Step 1: Mini Tester Candles (No Layering Yet)

- Pour 1 oz beeswax candles with individual scents and blended layers.
- Use 0.07 oz fragrance per ounce (7% load).
- Test:
 - Pine alone
 - Cedarwood alone
 - Birch Tar alone
 - Burnt Wood alone
 - Vetiver alone
 - Clove alone
 - Tobacco alone
 - Pine + Cedarwood
 - Birch Tar + Burnt Wood
 - Vetiver + Clove + Tobacco
 - Full blend (all layers mixed)

Step 2: Burn Test Instructions

- Cure candles for 48 hours before testing.
- Burn for at least 1 hour.
- Note the following:
 - Cold Throw (How strong is the unlit scent?)
 - Hot Throw (How strong is the scent when lit?)
 - Wick performance (Even flame? Too hot? Too low?)
 - Scent clarity (Clean or muddy?)

- Scent strength (Subtle or overpowering?)

Step 3: Layering Behavior

- Pour three 3 oz candles using only one fragrance layer in each.
- Burn each in stages and observe the transition.
- This helps evaluate how each layer stands on its own and blends during burn time.
